

1. class_enrollments

Stores records of which users have signed up for which scheduled fitness classes. Also tracks whether they attended.

2. class_schedules

Contains all scheduled fitness classes, including the class name, trainer, time, date, and capacity.

3. exercises

Holds a catalog of exercises used in workouts and programs. Includes details like muscle group, equipment needed, difficulty, and instructions.

4. goals

Tracks personal fitness goals set by each user, including target values, current progress, deadlines, and notes.

5. nutrition_logs

Stores daily meal and nutrition entries for each user. Each record represents one meal with macros, calories, and notes.

6. program_exercises

Links exercises to workout programs. Defines the sets, reps, rest time, workout day, and order of exercises in a structured training plan.

7. progress_tracking

Stores user body measurements over time (weight, body fat, muscle mass, circumferences). Used to track physical progress.

8. trainers

Contains information about fitness trainers such as contact info, certifications, experience, and specialties.

9. users

Stores core account information for all users of the website, including login credentials and status.

10. user_profiles

Holds extended profile information for users—fitness level, goals, medical notes, images, height/weight, and personal bio.

11. user_workouts

Records each workout session completed by a user. Includes duration, calories burned, program used, notes, and completion status.

12. workout_exercises

Stores the exercise-by-exercise details of a user's workout session (sets, reps, weight used, notes).

13. workout_programs

Contains structured workout programs created by trainers. Each includes a name, description, difficulty, duration, trainer, and images
